

Stefan Mitrovic

Blockchain Architect |
Protocol Engineer | Research
Engineer

- @cefika99@live.com
- +381668750546
- Belgrade, Serbia
- linkedin.com/in/cefika
- github.com/cefika

Education

- Faculty of Mathematics
Bachelor's degree
Computer Science
Belgrade, Serbia • 2020-2024
- Petnica Science Center
Valjevo, Serbia • August 2024
Web3 Camp
- Protocol Builders Program -
Polkadot/Parity
Lisbon, Portugal • April 2026

Publications

- Poseidon Hash in Python
April 2025

Skills

- Rust, TS, Python, C, C++,
<> C#, Solidity, Noir (Rust),
Circum, Cairo
- PostgreSQL, RocksDB, SQL
- Git, Docker, Kubernetes,
libp2p, Protobuf
- Substrate, Foundry,
Hardhat, Anchor
- Cryptography, Stealth
Addresses,
ZK-SNARKs/STARKs,
Recursive Proofs

Protocol Engineer & Architect specializing in infrastructure and ZK-based privacy-
. Expert in designing custom consensus mechanisms, stealth address protocols-
, and shielded transactions across Ethereum, Polkadot, Solana, and Starknet-
. A research-driven engineer focused on bridging advanced cryptography with
high-performance, production-ready systems.

Experience

- Bloxico - Highway
Protocol Engineer
Belgrade, Serbia
November 2025 - Present
Architected the entire Highway interoperability protocol from scratch, designing
a custom consensus mechanism and cryptoeconomic security model for the
decentralized relay network. Engineered the trust-minimized communication layer
to ensure fraud-proof cross-chain state synchronization.
- Petnica Science Center
Mentor - ZK, Cryptography, Protocol Architecture
Web3 Camp
August 2025 - Present
Designed and led a two-week onsite boot camp focused on onboarding developers into
the Web3 ecosystem, covering protocol fundamentals and decentralized architecture.
- Curvy
Protocol Engineer
Belgrade, Serbia
Apr 2025 - Nov 2025
Engineered stealth address protocols and ZK-shielded transactions to enable L0
privacy across Ethereum and Starknet. Designed and optimized ZK circuits and
cryptographic primitives for high-performance, cross-chain anonymity.
- 3327 - MVP WORKSHOP
Research And Development(ZK, Cryptography)
Belgrade, Serbia
Jan 2025 - Nov 2025
Architected Zero-Knowledge Machine Learning (ZKML) systems in Noir, utilizing
recursive proofs to verify model integrity without exposing sensitive weights or biases.
Streamlined on-chain verification by implementing cryptographic hashing of model
parameters, ensuring tamper-proof and privacy-preserving computation.
- Curvy MPC - ETH Belgrade bounties winning project
June 2025
Developed a privacy protocol utilizing Multi-Party Computation and stealth addresses
to enable secure, decentralized token swaps with hidden transaction metadata.
- Dutch Auction - Solana Superteam Balkan Bounty Winner
2025
Designed and implemented a high-performance on-chain Dutch auction mechanism on
Solana, optimizing for sub-second settlement and capital efficiency.
- Charity.fun - Solana Superteam Balkan Bounty Winner
2025
Architected a Solana-based fair-launch protocol for charitable tokens, utilizing a
bonding curve mechanism to ensure transparent and automated fund distribution.
- PBA-X: Wave 5
Polkadot
Dec 2025
- Zero Knowledge Proof - Cryptography
Mathematical Academy
January 2025
- Web3 Academy
AIN
April 2025
